

Website Site Health

The Website Site Health report is a detailed exploration into major website issues that can seriously impact a website's effectiveness. The issues uncovered have a direct impact on a business' cashflow.

An automated report that checks for:

- Broken Page Links
- Missing H1 Tags
- Unminified Scripts
- Chains and Loops
- Missing Alt Tags
- Robots.txt blocks
- Duplicate Content
- Blocked Pages
- Low Word Count
- Nofollow Links
- Duplicate H1s
- Broken External Links
- No Hreflang Usage
- Use of Flash/iFrame
- Old Security Settings
- And more...

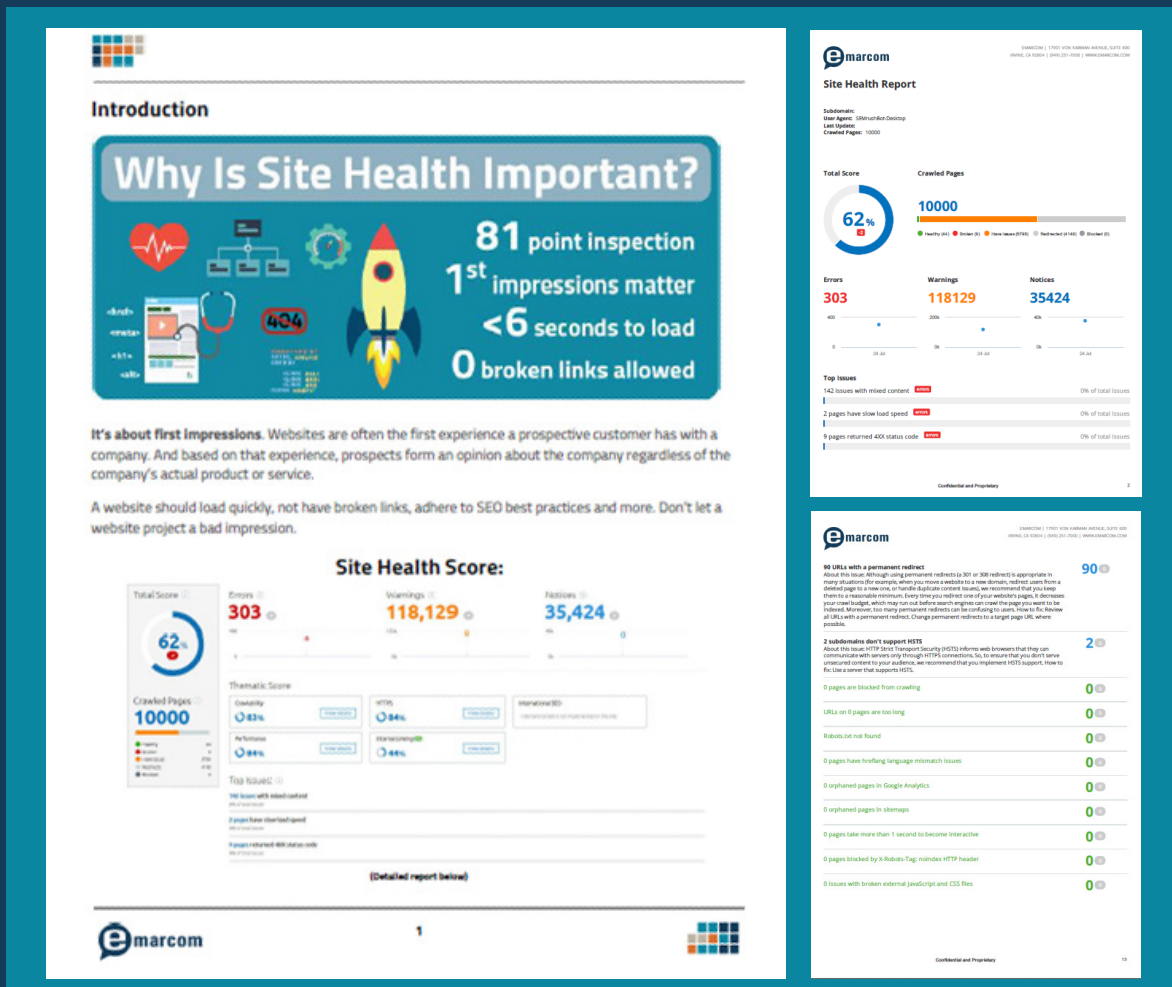

Does NOT include Detailed URL List

Introduction

Why Is Site Health Important?

81 point inspection
1st impressions matter
<6 seconds to load
0 broken links allowed

It's about first impressions. Websites are often the first experience a prospective customer has with a company. And based on that experience, prospects form an opinion about the company regardless of the company's actual product or service.

A website should load quickly, not have broken links, adhere to SEO best practices and more. Don't let a website project a bad impression.

Site Health Score:

Total Score: 62%
Crawled Pages: 10000
